Stopping the device

Stopping the device – stop ABCD

1

Stop the device(s)

- Press and hold the **Stop button** for 5 seconds.
- The **Shipment LED** will light up for 3 seconds to indicate a successful button press.
- The status on the display will change from **Shipping** to **Stopping**, then **Stopped**.

2

Check Alarm status

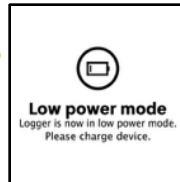

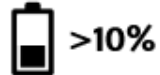

NO Alarm

- If there has been a temperature excursion, the Alarm LED will light up for 3 seconds before turning off, and a bell icon will remain visible in the top right corner of the display.
- Refer to your SOP and proceed accordingly.

3

Check Battery level

- Charge the device by plugging it into a Controlant charging station/USB charging adapter/computer USB port until it reaches a minimum 15% battery level.
- Note: Fully charging the device from depleted takes 6 hours.

4

Check Cloud connection status

- The device will show a successful Cloud connection. If not, press the stop button again in an area with stronger cellular reception.
- If unsuccessful again, complete a manual data upload at upload.controlant.com or contact Controlant Support for assistance.

5

Check calibration Date

- Controlant devices are calibrated annually. Check the back of the device for the **last calibration date**.
- If the device has surpassed its calibration period, contact Controlant Support.

✓

Return the devices

Place the device(s) in the assigned area for Controlant devices and follow the agreed process to return them when applicable, as they are reusable.
