Saga™ Device

Storing idle devices

Storage of idle Saga devices

Good cellular connection
The device always communicates with the cloud for data and firmware updates, even when idle.
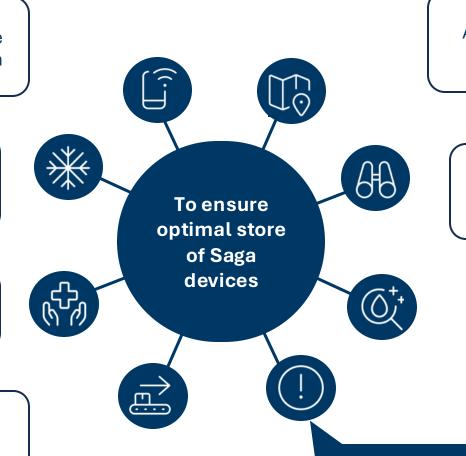

Temperature
Ensure that the ambient temperature is between 0°C and 25°C (32°F and 77°F).

Low charge
Never store a device with low battery.

FIFO
Use FIFO (First In, First Out) to reduce the time a Saga device spends in storage.

To ensure optimal store of Saga devices

Location
Avoid storing the Saga devices in metal enclosures or areas where cellular connection is poor.

Battery charge
Fully charge the device if the device is intended to be stored for more than 3 months.

Humidity
Keep the relative humidity below 80%.

If the above is not followed, the battery health of the Saga device may be compromised.
